Weekly Report for the week ending March 28, 2024

Liubov, Yevhen, Pavel, Daryna Team

Yevhen's Responsibilities/Progress:

Yevhen spent this week focused on the core structural backend of the project. He implemented databases and carefully considered the links between them for optimal interconnectivity and efficiency. He also created PHP models to output information upon request, which essentially function as APIs. This approach allows data to be accessed and manipulated dynamically and will form a vital component of the system.

Pavel's Responsibilities:

Pavel concentrated his efforts on the design and user interface by crafting Figma templates for a Kanban board for use with Moodle assignments. This UI/UX focus ensures that the information will be displayed in an organized, efficient, and user-friendly manner. The Kanban templates Pavel created are expected to streamline the workflow and significantly improve the usability of the platform.

Liubov's Responsibilities:

Liubov took on the crucial managerial duties this week, overseeing the team's progress on the project and ensuring everyone stayed on track. This included compiling this weekly report, presumably among other tasks. By centralizing communication and task assignment, Liubov's role is integral to keeping the whole team synchronized and moving towards the same goals.

Daryna's Responsibilities:

Daryna has just joined the team and has been mostly getting on track with the project layout, plans and timeline.

Overall:

This week's progress was substantial with each member playing crucial roles and turning conceptual aspects of the project into concrete developments. Yevhen's work forms the backbone of the system, Pavel's design efforts ensure a user-focused experience, and Liubov's managerial responsibilities ensure the project continues to move forward smoothly. As next steps, it would be beneficial to check the functionality of the newly-added features and to plan the tasks for the coming week accordingly.
